## ILLUSTRATION OF THE TYPES NAMED BY S. STILLMAN BERRY IN HIS "LEAFLETS IN MALACOLOGY" REVISED

CAROLE M. HERTZ<sup>1</sup>

Associate, Santa Barbara Museum of Natural History,  
2559 Puesta del Sol Road, Santa Barbara, California 93105, USA  
E-mail: cmhertz@pacbell.net

### Preface

This work is a revision of the supplement to Volume 15 (January 1984) of *The Festivus*. Since the death of S. Stillman Berry in 1984, his remaining Redlands collection, housing many types, was placed in several institutions. This revision strives to provide a complete listing of the repositories of his type material introduced in his *Leaflets in Malacology*, update the synonymies and, with the improvement in desk-top publishing, reprint with better quality the original Poorman photographs of that type material. The Berry Collection numbers are no longer included in this revision. Of the fourteen holotypes unaccounted for in the previous supplement only *Elaeocyma ricaudae* has not been found. The holotype of *Lepidozona inefficax* is still considered lost.

### Introduction

In November of 1946, S. Stillman Berry began the private publication of his *Leaflets in Malacology* which he instituted to facilitate the "publication and dissemination... of new mollusks of special interest under study" primarily by him. *Leaflets in Malacology* continued for twenty-three years concluding with Volume 1, Number 26 in December 1969. During these years, Dr. Berry described 99 marine molluscan species, renamed one species, and named 19 new genera in the "Leaflets." However, besides the internal drawing of *Octopus fitchi*, only two of the species (*Pedicularia californica ovuliformis* and *Assimineae infima*) were figured in black & white drawings. Few of the types had been illustrated until Hertz (1984).

It is the purpose of this revision to re-figure all of the types of the species named by Dr. Berry in the "Leaflets," with the exception of the eight species of *Octopus*. The original project would not have been possible without the efforts of Leroy and Forrest Poorman who saw the need to illustrate Dr. Berry's type specimens and had photographed all but two for the species described in the "Leaflets" (excluding *Octopus* species).

Most of the photography was done between July and December of 1971. In Leroy Poorman's words, "...Many of the types were photographed at Stanford [University] through the courtesy of Dr. Myra Keen. Fifty-nine specimens were photographed in one day. These specimens have since been placed in CAS [California Academy of Sciences]; ...we spent much time at Berry's home photographing. He gave us oral permission to use the slides in any way we wished. He said that they should be published but that the cost was too high, even for him ... We went through the special chest in which he kept his types when we were photographing there."

The types of *Cirsotrema pentadesmium* and "*Pedicularia (californica?) ovuliformis*" were photographed by David K. Mulliner. He also gave of his time and talent in preparing the black and white prints from Leroy Poorman's original color slides.

### Discussion

In determining the scope of the first paper, I had decided that the inclusion of the known repositories of the Berry typological material would be of value. In this, the Poorman slides were again of considerable help

<sup>1</sup>Mailing address: 3883 Mt. Blackburn Ave., San Diego, CA 92111, USA

The repositories of the holotype and paratypes of each species are also listed, when known. Paratype material in private collections is not considered here since its ready availability for study by workers in the field cannot be assured. In the case of the type material which was donated to Stanford University (SU) and is now on permanent loan at the California Academy of Sciences; only the six-digit California Academy of Sciences (CAS) number appears. In cases in which the specimen was deposited in the CAS prior to their current numbering system, the newer six-digit number appears first with the original CAS number in brackets. A brief synonymy is included for the species, when applicable.

A chronological listing of titles by Dr. Berry in the "Leaflets" is on Pages 4 and 5, and an index to the Berry species appears on Page 43.

Abbreviations used in the text: AMNH -- American

Museum of Natural History; BM(NH) -- The Natural History Museum, London; CAS -- California Academy of Sciences; LACM -- Los Angeles County Museum of Natural History; MCZ -- Museum of Comparative Zoology, Harvard University; SBMNH -- Santa Barbara Museum of Natural History; SDNHM -- San Diego Natural History Museum; SU -- Stanford University; TM -- Trømsø Museum, Tromsø, Norway; NMNH -- National Museum of Natural History, Smithsonian Institution; USNM -- Collections of the National Museum of Natural History; alt. -- maximum altitude; long. -- maximum longitude; ca. -- approximately; l.v. -- left valve; diam. -- maximum diameter; mm -- millimeter(s); *fide* -- according to, in the belief of; P -- paratype; pers. comm. -- personal communication; fig(s). -- figure(s); p(p). -- page(s); H -- holotype; r.v. -- right valve; lat. -- maximum latitude; W -- west; S -- south; N -- north.

### List of Genera Proposed in the "Leaflets"

The 19 genera proposed by S. Stillman Berry in the "Leaflets" are listed here. The generic types are not figured except in those cases in which they also represent a Berry species named in the "Leaflets." A synonymy is not included for the genera.

Genus	Generitype	Page Number in "Leaflets"
<i>Stromboli</i>	<i>Fissurella beebei</i> Hertlein & Strong, 1951	70
<i>Tiphyocerma</i>	<i>Tiphyocerma preposterum</i> Berry, 1958	83
<i>Tiariturris</i>	<i>Tiariturris spectabilis</i> Berry, 1958	87
<i>Turrigemma</i>	<i>Turrigemma torquifer</i> Berry, 1958	88
<i>Hormospira</i>	<i>Pleurotoma maculosa</i> Sowerby, 1834	90
<i>Nomaeopelta</i>	<i>Acmaea dalliana</i> Pilsbry, 1891	91
<i>Stearnsium</i>	<i>Uvanilla regina</i> Stearns, 1892	92
<i>Lapsigyrus</i>	<i>Alvania contrerasi</i> Jordan, 1936	92
<i>Opeatostoma</i>	<i>Buccinum pseudodon</i> Burrow, 1815	93
<i>Mitromica</i>	<i>Mitra solitaria</i> C.B. Adams, 1852	94
<i>Hertleinella</i>	<i>Hertleinella leucostephes</i> Berry, 1958	95
<i>Calcitrapessa</i>	<i>Murex (Chicoreus) leeanus</i> Dall, 1890	113
<i>Pegmapex</i>	<i>Pegmapex phoebe</i> Berry, 1960	115
<i>Tellidorella</i>	<i>Tellidorella cristulata</i> Berry, 1963	140
<i>Crenimargo*</i>	<i>Crenimargo electilis</i> Berry, 1963	140
<i>Lunaia</i>	<i>Lunaia lunaris</i> Berry, 1964	148
<i>Trialatella</i>	<i>Trialatella cunninghamae</i> Berry, 1964	149
<i>Diptychophlia</i>	<i>Diptychophlia occata</i> (Hinds, 1844), as of Berry (1964)	150
<b>Subgenus</b>		
<i>Bessomia</i>	<i>Thyca (Bessomia) callista</i> Berry, 1959	110

\**Cymatioa* Berry, 1964:154, new name for *Crenimargo* Berry, 1963, not Cossmann, 1902.

since, for example, the slides of holotypes which had already been deposited at Stanford University were so noted. The catalogues of molluscan type specimens by Richards & Old, 1969; Smith, 1978; Sphon, 1966, 1971; and Wilson & Kennedy, 1967, were then consulted for further information on the location of Berry type material. Further, in the "*Leaflets*" 1(14): 75 (July 19, 1957), Dr. Berry wrote, "Holotypes of all the new forms, except as otherwise noted are intended to be deposited in the type-collection of the Department of Paleontology, Stanford University. Paratypes are in the author's collection, although they will be shared as far as the material permits with the U.S. National Museum, San Diego Museum of Natural History, Los Angeles County Museum and perhaps some other collections."

From this beginning, a search was made to confirm the repositories of much of the type material and to locate additional Berry type material for species named in the "*Leaflets*." Dr. Berry frequently specified the intended recipients (museums) of the type material of the species he described. Using this information, inquiries were sent to those museums. Each institution was asked to check its collections for the type material in question. They were asked for the quantity of material for each species and their museum catalog numbers. I then personally checked the type collections of the Los Angeles County Museum of Natural History, San Diego Natural History Museum, Santa Barbara Museum of Natural History, and the California Academy of Sciences.

After Dr. Berry's death, scientists from several institutions came to the Berry home to prepare his remaining collection for inclusion in museum collections. The major part of the collection was incorporated into the collections of the SBMNH and that institution's accession numbers replace those of the Berry Collection numbers shown in the original supplement. The cephalopod types were brought to the NMNH to be added to their molluscan holdings.

In reviewing the repositories for the Berry type material, it was learned that Dr. Berry sometimes deposited parts of a single type specimen in more than one collection. For the holotype of *Stenoplax isoglypta*, as an example, Dr. Berry (p. 72) deposited one valve in the National Museum of Natural History (USNM 612205, sixth valve), one valve in Stanford University (SU 8649) [now at CAS 0439401] (designated a paratype in earlier literature), and retained the remaining valves in his collection (Redlands 19160) [now at SBMNH 34426].

Further requests for information concerning other type material for species described in the "*Leaflets*" were also sent to the museums. In this regard, I received a reply from the Trømsø Museum, Norway, to my request for information on a paratype of *Barbatia rostrae* which Dr. Berry had intended to deposit there. Dr. Wim Vader, Curator, kindly sent photographs of their specimen and its accompanying label. While the photographs indicate the specimen to be *Barbatia rostrae*, I have listed their specimen as "possible paratype" since proof of its status as a paratype is lacking.

The information in the original paper on the cephalopod type material referred to in the "*Leaflets*" was obtained through the efforts of Dr. F.G. Hochberg of the Department of Invertebrate Zoology, Santa Barbara Museum of Natural History, who with Dr. Clyde Roper of the Department of Invertebrate Zoology, National Museum of Natural History, began organizing Dr. Berry's cephalopod type collection during August 1983. This type material was then sent to the National Museum of Natural History, Smithsonian Institution, to be accessioned in their type collection (Hochberg, pers. comm). Mr. Mike Sweeney of the Department of Invertebrate Zoology of that institution provided me with their catalogue numbers for these specimens.

Since the death of Dr. Berry, Sweeney, Roper & Hochberg (1988) published a detailed study of all the Berry cephalopod material in a catalog summarizing "the status of Berry's Recent cephalopod type material from his collection as well as from all known museum repositories...." Table I is a summary of the cephalopod species described by Dr. Berry in the "*Leaflets*."

### Format

Each Berry type shown here appears in the same sequence as in the "*Leaflets*" in the hope that this will facilitate the use of this paper as an illustrated companion to the original Berry work. Each entry is listed with its original orthography: an [H] or [P] next to the name indicates that the specimen figured is a holotype or paratype. The date, volume, and page number(s) of the original description appear beneath the species name followed by the dimensions of the holotype and the type locality.

The measurements of all but three species (*Nomaeopelta myrae*, *Muricanthus callidinus*, and *Pleuroliria artia*) are those given by Dr. Berry in the "*Leaflets*." The length dimension of the holotypes of the other three species, not given by Dr. Berry, are those of the author.

**Table 1:** A Summary of the Cephalopod Species Described by S. Stillman Berry in his "Leaflets"

Species	Year/Page	Type	Repository	Type locality

### Bibliography of Papers by S. Stillman Berry in *Leaflets in Malacology*

1946. Californian forms of *Pedicularia*. 1(1): 1-4, 1 fig. (Nov. 4)  
 1947. A surprising molluscan discovery in Death Valley. 1(2): 5-8, 2 figs. (May 3)  
 On the generic relationships of certain Lower Californian helicoid snails. 1(3): 9-12. (Oct. 1)  
 1948. Two misunderstood West American chitons. 1(4): 13-15. (Feb. 20)  
 A note on Rowell's types in *Pupa* and *Gundlachia*. 1(4): 16. (Feb. 20)  
 1949. A new *Opisthoteuthis* from the Eastern Pacific. 1(6): 23-26. (June 13)  
 1950. A partial review of some West American species of *Crepidula*. 1(8): 35-40. (Nov. 14)  
 A pteropod new to California. 1(8): 41-42. (Nov. 14)  
 1952. Another interesting addition to the Californian pteropod fauna. 1(9): 50. (July 10)  
 1953. Preliminary diagnoses of six West American species of *Octopus*. 1(10): 51-58. (Dec. 18)  
 1954. with Bruce W. Halstead, *Octopus* bites—a second report. 1(11): 59-65, 1 fig. (Jan. 28)  
*Octopus penicillifer*, new species. 1(11): 66. (Jan. 28)  
 West American molluscan miscellany.—I. 1(11): 67-70. (July 9)  
 1956. Diagnoses of new Eastern Pacific chitons. 1(13): 71-74. (July 9)  
 1957. Notices of new Eastern Pacific Mollusca.—I. 1(14): 75-82. (July 19)  
 1958. Notices of new Eastern Pacific Mollusca.—II. 1(15): 83-90. (Mar. 28)  
 West American molluscan miscellany.—II. 1(16): 91-98. (May 31)  
 1959. Comments on some of the trivariante muricines. 1(17): 106. (July 29)  
 Notices of new Eastern Pacific Mollusca — III. 1(18): 107-113. (July 29)

1959. Comments on some of the trivariate muricines (cont'd). 1(18): 113-114. (July 29)  
1960. Notices of new Eastern Pacific Mollusca--IV. 1(19):115-122. (Dec. 31)  
1962. A note on *Cantharus*, with proposal of a new specific name. 1(20): 129-130. (Nov. 13)  
1963. Diagnoses of new Eastern Pacific chitons--II. 1(22): 135-138. (Mar. 29)  
Notices of new Eastern Pacific Mollusca--V. 1(23): 139-146. (Sept. 30)  
1964. Notices of new Eastern Pacific Mollusca--VI. 1(24): 147-154. (July 29)  
1968. Notices of new Eastern Pacific Mollusca--VII. 1(25): 155-158. (Sept. 26)  
1969. Notices of new Eastern Pacific Mollusca--VIII. 1(26): 159-166. (Dec. 17)

## Acknowledgments

I am indebted to many people for the help they gave me in the preparation of the original paper. Foremost of these are Forrest and the late Leroy Poorman who made their slides and note cards available as well as giving me background information for the project. The black and white prints and the original photographs of two of the type specimens were done by David K. Mulliner, to whom I record my special thanks.

My gratitude is extended to the following people who were kind enough to look for Berry type species in their respective institutions and provide me with catalogue numbers for those in their collections: Kenneth Boss and Carey Westermann (MCZ), William K. Emerson (AMNH), the late Joseph Rosewater (NMNH), Paul Valentich Scott (SBMNH), Robert Van Syoc (CAS), Solene Morris, then of the (BMNH), and Wim Vader (TM).

I thank Eric Hochberg (SBMNH) who looked for the Octopus types at Dr. Berry's home and who sent me detailed information on what he found. My thanks also to Mike Sweeney (NMNH) who was good enough to give me their catalogue numbers by phone when I belatedly realized I had neglected to request them.

Eugene Coan, Helen DuShane, A. Myra Keen and Barry Roth were kind enough to help in locating the type of *Cirsotrema pentadesmium* for which I am grateful, and James H. McLean and the late Gale Sphon graciously made the LACM collections available to me to check type species. Barry Roth and Robert Van Syoc also gave generously of their time during my visit to the CAS to confirm types in their collection and secure their new catalogue numbers.

My appreciation goes to the late Anthony D'Attilio and George Hanselman who advised me on the muricid and chiton species respectively. I am indebted to James H. McLean for his encouragement and for his review of the original paper. To the late Myra Keen who also reviewed the paper, offering helpful suggestions on the material deposited at Stanford University and on fine points in the text, I offer my sincere appreciation. More than anyone, my gratitude goes to Jules Hertz; he not only encouraged me in the project but assumed the roles of critic and proofreader. Without the help of these many people, that project could not have been undertaken and I am grateful to them for their assistance; however any errors in that paper are the responsibility of the author.

The original Berry supplement was prepared and published in 1984, before this author/editor knew that computers would ever enter her life. For this revision I am beholden to many people: Kim Hutsell of San Diego scanned the (1984) supplement, thus making the revision possible; my three friends in the Invertebrate Zoology Department of the SBMNH, Henry W. Chaney, F. G.(Eric) Hochberg and Paul Valentich Scott made the facilities of the Department and its collection available to me. Paul made a computer printout for me of all the Berry types from the "*Leaflets*" housed in the SBMNH, Henry helped locate literature, and Eric provided the cover photo. Mike Sweeney of the NMNH sent literature to me updating the cephalopod types in their collection and Carol Skoglund and Terry Arnold made literature available to me. Lastly I thank Suzanne Parlett who again designed the cover, this time using a photo of Dr. Berry with his cat, Purryboy, from the archives of the SBMNH.

Figure 1. *Pedicularia (californica? phase or form?) ovuliformis* (interior and exterior) [P-SDNHM]  
1946. 1(1): 3-4, fig. 1 (p.1) (Nov. 4)

Size: alt. 7.47; diam. 4.89 mm  
 Type loc.: Farnsworth Bank, off outer coast of Catalina Island, California, in 21 fm [38.4 m]  
 Holotype: CAS 043924  
 Paratypes: CAS 043925, 1 specimen and coral

(Berry), *fide* Petuch & Sargent, 1986: 135]

Figure 90. *Elaeocyma ricaudae* [H]  
1969. 1(26): 164-165 (Dec. 17)

Size: alt. 29.4; diam. 11.9 mm  
Type loc.: San Juanico area, "probably more precisely Boca Soledad" Baja California Sur, México, trawled in 24-26 fm [44-48 m]  
Holotype: not found  
Paratypes: LACM 1445, 2 specimens  
SBMNH 34659, 32 specimens  
[= *Cymatosyrinx* (*Elaeocyma*) *ricaudae* (Berry), *fide* Abbott, 1974: 276]

Figure 91. *Elaeocyma baileyi* [H]  
1969. 1(26): 165-166 (Dec. 17)

Size: alt. 8.5; diam. 3.33 mm  
Type loc.: Bahía de las Palmas, Baja California Sur, México, dredged in 17-33 fm [31-60 m]  
Holotype: SBMNH 34660  
Paratypes: SBMNH 34661, 3 specimens  
[= *Splendrillia lalage* (Dall, 1919), *fide* McLean *in* Keen, 1971: 705; Abbott, 1974: 275]

Figure 92. *Siphonaria williamsi* [H]  
1969. 1(26): 166 (Dec. 17)

Size: long. 7.10; lat. 5.25; alt. 2.96 mm  
Type loc.: cove inside Flat Rock, S end of Isla Natividad, Baja California, México  
Holotype: SBMNH 34662  
Paratype: SBMNH 34663, 2 specimens  
[= *Siphonaria* (*Kerguelenia*) *williamsi* Berry, *fide* Abbott, 1974: 336]
